Customer Service Chatbot

Description:

Build a simple chatbot that can assist customers with common queries. The chatbot should be able to respond to questions about store hours, location of store , return policies, and more. Use conditional statements to guide the conversation based on user input.

Example Conditionals:

If user asks about store hours, provide the hours of operation.

If user inquires about return policy, detail the return process and conditions.

If user needs store location , give the store address.
